oin wallet Electrum updates the phishing theft continues.

Electrum is a desktop Bitcoin wallet that supports multiple operating platforms. The German computer scientist designed efficient, lightweight features.

Fake: [github/electrum-wallet/electrum/releases](https://github.com/electrum-wallet/electrum/releases).

A botnet with more than 140,000 machines has launched a DoS attack on the server of Bitcoin wallet Electrum in an attempt to direct users to software versions designed to steal bitcoins, Theextweb reported. Electrum users have been advised to take extra care when using the platform until the issue is resolved. Security researchers familiar with the matter say that if a user installs a fake version of Electrum, all funds contained in the old version will be lost immediately.

The Healthy Security Lab is concerned that Nearly 250 bitcoins have been stolen in a recent hacking attack on an Electrum wallet. This attack, confirmed by Electrum, involves creating a fake version of the wallet to trick users into providing password information. Electrum responded on Twitter that it was an ongoing phishing attack on Electrum users and advised them to download wallets from the official website.

It's not hard to run your own Electrum server and point your wallet to just use it. This restores Electrum to the point where it has the same privacy and security attributes as the full node, where no one else can see the address or transaction that the wallet is interested in. Electrum then becomes an all-node wallet.

Slow Fog Alert: The world's leading Bitcoin wallet Electrum "updates phishing" currency theft continues.

# Bitcoin Is Hard to Understand

At the crossroads of:

- Cryptography
- Computer networking and distributed systems
- Game theory
- Monetary theory

With relevant cultural and political implications

*Mainly not a technology,  
a cultural paradigm shift instead*

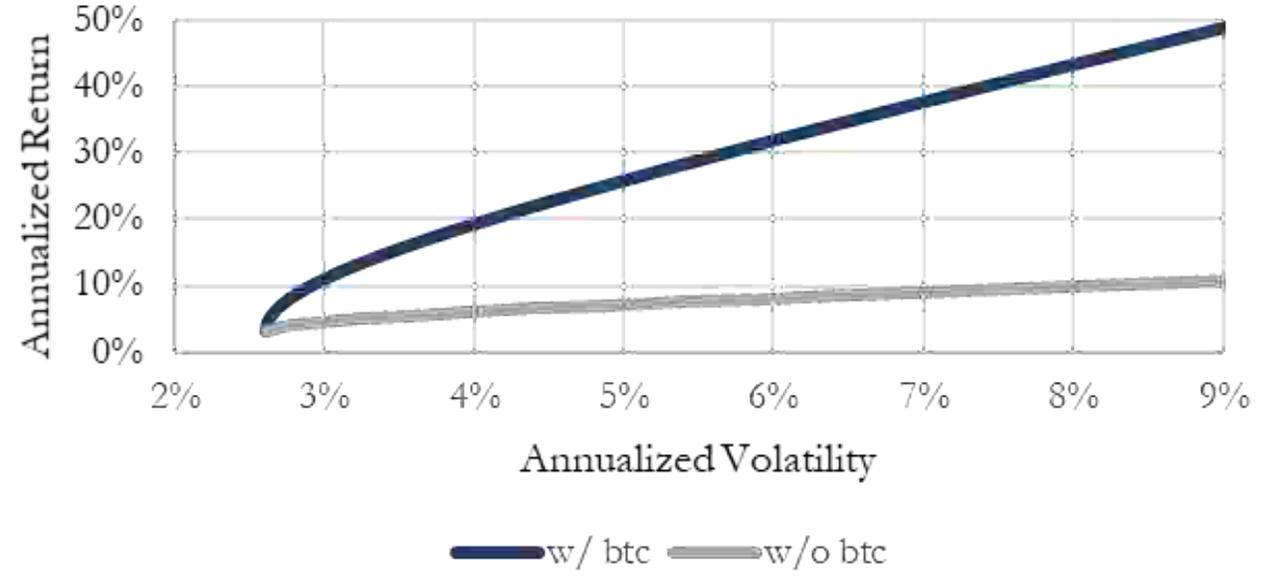

# Bitcoin: CAPM Diversification

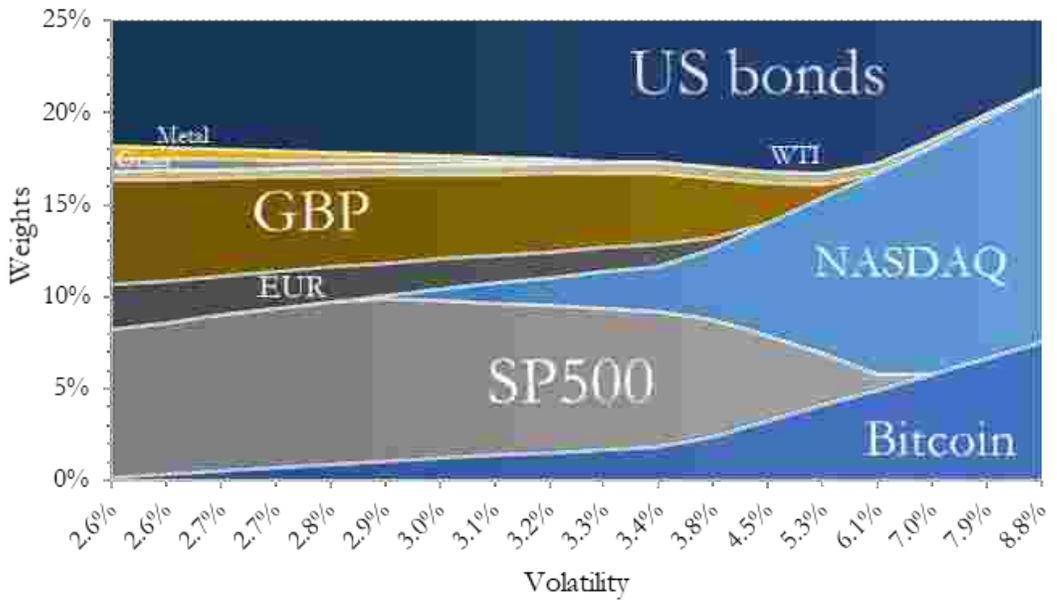

Bitcoin increases expected return for a given level of risk, e.g.

- at 4% volatility, return increases more than 140bps
- at 10% return, volatility decreases from 8.60% to 2.90%

## CAPM Efficient Frontier

## Optimal Allocation Including Bitcoin

For conservative risk levels, optimal CAPM diversification suggests to invest in Bitcoin up to 5% of the portfolio

# Comparison with Amazon

The value of digital gold is as hard to grasp today as the value of e-commerce in the 90s.

Bitcoin worst drawdown has been 93.07%; Amazon worst drawdown has been 94.40% when the dot-com bubble burst

# Take Money out of the Hands of Government

*"I don't believe we shall ever have a good money again before we take the thing out of the hands of government, that is, we can't take them violently out of the hands of government, all we can do is by some sly roundabout way introduce something that they can't stop."*

F. A. Hayek

<https://youtu.be/EYhEDxFwFRU?t=19m23s>

- Decentralized digital currency
- Not backed by any government or organization
- No need for trusted third party
- Instantaneous peer-to-peer transactions
- Cryptographic security
- Synergic economic incentives
- Efficient low-cost banking for everybody everywhere

# Bitcoin Transactions Are Not Taking Off

- There is evidence that bitcoin is not really used for transactions
- Max number of transactions per second
  - VISA: 60,000 tx/sec
  - Bitcoin: 7 tx/sec
- Bitcoin can only scale with second layer solutions, e.g. Lightning Network, Sidechain (Liquid)
